

To my beautiful daughter Zooecia

and

my devoted husband Patrick

They are my inspiration, my love

## ACKNOWLEDGEMENTS

This work would not be possible without a graduate student research grant from the Geological Society of America, the Vanderbilt University Department of Earth and Environmental Sciences, and my advisor Kaye Savage, to whom I am especially thankful for her hard work and patience. Dr. Savage not only helped me develop this project, but she also helped me develop relationships with many federal, state, and local agencies that proved invaluable to this work.

Dr. Savage's encouragement to build information bridges with key organizations gave me direction and better insight into how watershed studies are conducted. I would like to thank those individuals and agencies who contributed to this project: Jimmy Smith and Sherry Wang at TDEC, George Law and Donna Flohr at the USGS, Barry Moran and Lester King at the ACE, Jenny Adkins from the USDA, and Margo Farnsworth and the staff from the Cumberland River Compact. I would also like to thank my committee members Dr. Ayers and Dr. Molly Miller for their time and effort. Other faculty members whose consultation proved invaluable: Dr. Moore, Dr. Alberstadt, Dr. Sterns, Dr. Clarke and Prof. Vandenberg.

I am also very grateful to my lab and field partners Matt Holcombe and Meaghan Robertson who worked tirelessly on this project, as well as the many graduate students who accompanied me into the field in all conditions.

I also would like to thank my husband and his family for their support and understanding. They helped me balance the responsibilities of motherhood and

scientific inquiry. Patrick took pleasure in spending time with me in the field and took pride in my work. He always believed in me when I did not and has proven that as a team we can accomplish anything.

Finally, I would like to thank my mother who always said I was the smartest person she knew, and the rest of my family who were always encouraging. If it wasn't for my entire tribe making the effort for my success I would never have gotten so far. Thank you all so very much.

# TABLE OF CONTENTS
