

To my wonderful parents, Albert and Sharon Reece
for their infinite love, encouragement, and support

ACKNOWLEDGEMENTS

I would first like to express my deepest gratitude to my thesis advisor, Dr. Brian Wadzinski, for his continuous support, guidance, and patience. I always felt that he truly wanted me to succeed in my PhD, and I am very grateful for all of the time that he invested in my development as a scientist. I am also very grateful for the efforts and advice of my thesis committee: Dr. Bih-Hwa Shieh, Dr. George Hill, Dr. Roger Chalkley, and Dr. Joey Barnett. Their helpful suggestions and scientific contributions were invaluable. In addition, I would like to thank Dr. Lee Limbird who gave important and sage advice to me about my project. I would also like to especially thank Dr. Lou DeFelice, who always encouraged me and believed in me. To all the members of the Wadzinski laboratory, I will always be thankful for your friendship and support during my graduate years. In particular, I would like to recognize Matt Mazalouskas who I collaborated with on several of the studies found in Chapter II. I am very fortunate to have developed friendships with several wonderful people during graduate school, who provided me with laughter and emotional support, and truly made my days brighter.

Nobody has been more important to me in the pursuit of this degree than the members of my family. My sisters, Brynne and Sharon-Andrea, have become more than just sisters to me – they are my best friends as well. Words cannot express the gratitude that I feel towards my parents, Albert and Sharon Reece, for their constant prayers on my behalf, their inexhaustible encouragement of my spirits, and their unfailing confidence in my abilities.

Lastly, this work would not have been possible without the financial support of the Vanderbilt Training Grant 2-T32-GM07628 and NIGMS Predoctoral Fellowship

which were awarded to me, and NIH Grants GM051366 and 354DK070787 which were awarded to my advisor, Dr. Brian Wadzinski.

TABLE OF CONTENTS

	Page
DEDICATION	iii
ACKNOWLEDGEMENTS.....	iv
LIST OF TABLES	ix
LIST OF FIGURES.....	x
 Chapter	
I. INTRODUCTION.....	1
Regulation of Cellular Signaling by the Reversible Phosphorylation of Proteins	1
Serine/Threonine Phosphatases	2
Overview of PP2A.....	5
Elucidating the Biological Functions of PP2A.....	11
Regulation of PP2A	13
Defining Cellular Substrates for PP2A.....	15
Ca ²⁺ /Calmodulin-Dependent Protein Kinase IV.....	18
CaMKIV Activation/Inactivation	22
CaMKIV Function	26
The Role of PP2A in CaMKIV Signaling.....	28
Summary	30
II. DIFFERENTIAL REGULATION OF ENDOGENOUS AND ECTOPIC CAMKIV PHOSPHORYLATION BY PP2A.....	32
Introduction	32
Materials and Methods.....	34
Antibodies and Reagents.....	34
Cell Culture and Transfection.....	35
Subcellular Fractionation	36
Immunofluorescence and Confocal Microscopy	36
Coimmunoprecipitations	37
Characterization of CaMKIV Phospho-Specific Antibodies	38
Analysis of CaMKIV T200 Phosphorylation	40
Western Analysis	41

Results.....	42
Characterization of Two CaMKIV Phospho-T200-Specific Antibodies	42
The Phosphorylation of Endogenous and Ectopic CaMKIV is Differentially Regulated by PP2A	48
Subcellular Localization of Ectopic and Endogenous CaMKIV	51
Endogenous, but not Ectopic CaMKIV, Binds to PP2Ac	53
Discussion	56
III. THE REGULATORY B SUBUNITS OF PP2A ARE CRITICAL MODULATORS OF THE CAMKIV•PP2A SIGNALING COMPLEX	61
Introduction	61
Materials and Methods.....	63
Antibodies and Reagents	63
Plasmid Constructs.....	64
Cell Culture and Transfection.....	65
RNAi-Mediated Knockdown of B α	65
Coimmunoprecipitations	66
Purification of FLAG-Tagged Proteins.....	67
Preparation of Phosphorylated Substrates and Phosphatase Assays.....	68
<i>In Vitro</i> CaMKIV Dephosphorylation Assays.....	68
Western Analysis	69
Results.....	70
B α - and B δ -Containing PP2A Holoenzymes Associate with CaMKIV	70
The B subunits Recruit PP2Ac to CaMKIV	73
AB α C- and AB δ C-Mediated Dephosphorylation of CaMKIV.....	76
Multiple B subunit-Containing Holoenzymes Dephosphorylate CaMKIV ...	78
Discussion	83
IV. SUMMARY AND FUTURE DIRECTIONS	87
Summary	87
Future Studies.....	90
Does the Reconstituted CaMKIV•PP2A Complex Mimic the Endogenous Complex?.....	90
Does the Regulatory B subunit Remain Stably Associated with CaMKIV?	92
What is the Oligomeric Composition of the CaMKIV•PP2A Signaling Complex?	93
Which Region of the B Subunit(s) Contains the Binding Domain for CaMKIV	95

LITERATURE CITED.....97

LIST OF TABLES
