

## ACKNOWLEDGEMENTS

I would like to first of all thank my mentor, Matt Tyska. He has trained me how to be a scientist in every sense of the word; watching him build a successful research group from the ground up has been one of the best learning experiences of my nascent career. Matt has taught me to always look ahead, and to have the courage to simply follow where the data leads. I would also like to thank all the members of the Tyska laboratory for their support, help, and friendship; it has been a privilege to work with such a talented and creative group.

I would also like to thank the members of my committee who have helped oversee my training: Drs. Jim Goldenring, Anne Kenworthy, Alissa Weaver, and Byeong Cha. This amazing group of scientists has offered me invaluable advice, expertise, and encouragement over the last 5 years. I would also like to thank the members of the Epithelial Biology Center for many fantastic interactions, particularly Drs. Robert Coffey and James Higginbotham with whom we have had great collaborations. I would also like to acknowledge the support I've received from the American Heart Association and especially the Vanderbilt Developmental Biology Program. It has been an honor to be a member of the PDB, a group whose passion for science is truly inspirational.

I would like to thank all of my parents for their love and support; I would not be the person I am without them. And finally, I am grateful to my wife Amy

for her encouragement, baked goods, understanding, and love, without which I would be lost.
