

SUPERHYDROPHOBIC POLYMETHYLENE FILMS

BY

Robin Jay Spears

Thesis

Submitted to the Faculty of the
Graduate School of Vanderbilt University
in partial fulfillment of the requirements

for the degree of

MASTER OF SCIENCE

In

CHEMICAL ENGINEERING

December, 2009

Nashville, Tennessee

Approved:

Professor G. Kane Jennings

Professor Paul E. Laibinis

To my beloved wife, Brittani, infinitely supportive
To my late grandfather, Herbert, whose legacy is my guiding light
and
To my family, epitome of a supporting cast

ACKNOWLEDGEMENTS

I would like to express my gratitude to Professor G. Kane Jennings throughout the duration of this thesis project. Regardless of the situation and circumstance, his unyielding guidance and support helped make this a success. He showed great character and left me realizing that he is not only an outstanding professor, but an amazing mentor and friend as well.

No one has been more important in this process as my wife Brittani. Her emotional and physical support as a spouse, mother, and friend made this journey much more of a pleasure and I am thankful I had her to walk through this journey in my life with me. Good times and bad, I could not have asked for a more inspiring, motivating, and understanding person to have at my side and I will forever be thankful.

Last, but not least, I would like to extend some love and appreciation to my family. My parents and sisters who have helped give me the tools to take on this stage of my life over the last 26 years. Family can be the biggest asset a person can have and that is certainly the case here.

TABLE OF CONTENTS

DEDICATION.....	ii
ACKNOWLEDGMENTS.....	iii
LIST OF FIGURES.....	v
CHAPTER 1. INTRODUCTION/BACKGROUND.....	1
Polyhomologation.....	3
Surface-Catalyzed Growth of Polymethylene.....	4
CHAPTER 2. EXPERIMENTAL.....	9
Materials.....	9
Synthesis of Undec-10-ene-1-thiol.....	10
Preparation of Diazomethane.....	10
Film Preparation.....	11
Electrochemical Impedance Spectroscopy.....	12
Infrared Spectroscopy.....	15
Contact Angle Measurements.....	16
Atomic Force Microscopy.....	17
Scanning Electron Microscopy.....	17
CHAPTER 3. RESULTS AND DISCUSSION.....	18
Wettability and Hysteresis.....	23
Atomic Force Microscopy Imaging.....	25
Barrier Properties of PM Films.....	32
Stability of the Superhydrophobic Property.....	37
Utilization of Heat Exposure.....	41
Conclusions and Recommendations for Future Work.....	41
REFERENCES.....	43

LIST OF FIGURES

Figure	Page
1.1 Reaction steps for growing polymethylene films.....	7
2.1 Illustration of a Randles circuit.....	13
2.2 Bode plot of PM film electrochemical impedance.....	14
3.1 RAIR spectrum of a PM film grown from borane-modified Au.....	19
3.2 Infrared absorbance for C-H rocking signals of PM films.....	20
3.3 Picture of a water droplet on a PM surface.....	21
3.4 Advancing and receding water contact angles (a) and hystereses (b).....	22
3.5 AFM images and lines scans of PM films.....	25
3.6 Integrated absorbance of the C-H bending peaks from IR.....	28
3.7 Electrochemical impedance/film resistance and capacitance data.....	30
3.8 EIS spectra for a PM film exposed to TCB.....	35
3.9 RAIR spectra of the C-H bending region before and after TCB.....	36
3.10 Effect of water exposure on contact angles.....	37
3.11 SEM images before and after water exposure.....	38
3.12 Effect of exposure to 135 °C on contact angles.....	39
3.13 SEM images before and after 135 °C exposures.....	40
